DETAILED ACTION

Allowable Subject Matter

1. Claims 1-20 are allowable over the prior art of record.

The allowable subject matter for claims 5-20 was indicated in the Office Action mailed 11/29/2005.

As for claims 1-5, the prior art of record fails to teach or render obvious a phase-change memory device including a phase change material layer with all limitations as recited in claim 1. In particular, Johnson et al. U.S. Patent Application Publication 20040113232 (the '232 reference) do not teach a first electrode having a contact area that extends into a recess of the first electrode to provide current density concentration adjacent thereto, and further do not teach that the phase change material layer directly contacts the first electrode throughout the recess; First electrode 130/140 of Wicker, U.S. Patent Application Publication 20040113181 (the '181 reference), might have a recess and phase change material layer 120 might appear to directly contact the first electrode throughout the alleged recess, but in operation electrical current flows from/to active region 656 to portion 130 of the first electrode 130/140, uniformly through a portion of the phase change memory layer 120 between portion 130 and portion 140 of the first electrode 130/140, to portion 140 of the first electrode 130/140, and to/from second electrode 690, thereby does not provide an electrical current density concentration.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
